Project Documentation - Part A

System Architecture & Design

Chapter 1: Introduction

The Agentic Document Automation System processes Word and PDF files based on tasks declared in a JSON configuration file.

Key Features

- Template-based Word report generation
- PDF watermarking, merging and text extraction
- Audit logging of every task

Project Documentation - Part B

Implementation & Testing

Chapter 2: Implementation

DocumentAgent dispatches each task type to WordTasks or PDFTasks.
Results and errors are recorded in an audit report (JSON).

Chapter 3: Testing

- Verified placeholders are replaced in the generated report
- Verified watermark appears on every page
- Verified merged PDF contains Part A followed by Part B
